

HERE'S THE INFO ON YOUR
NEW '67 CRESTLINERS
 "MORE Famous for the Finest"
 Pound for Pound the Best Boat Value!

**ES QUALITY
 CONSTRUCTION**

22 MODELS IN
 ALUMINUM & FIBER GLASS
 FROM CARTOPPERS TO
 OFF SHORE SPORT BOATS

FEATURING THE SOFT-RIDING "STABILIZED-VEE" HULL

Crestliner's Stabilized-Vee hull smoothes out the roughest chop at high speeds - but also is engineered to operate more efficiently than ordinary deep V designs at intermediate and slow speeds. Interior load distribution is no problem - people are free to move about without affecting performance. - Performance facts match boat to load.

Fasteners are stainless steel - others use plated
 Coast Guard approved ventilation

Multi-purpose cockpit coaming extrusion provides strength, convertible top attachment & sliding adjustment and a cockpit rub-rail

EXCLUSIVE 'CREST-WELD'
 all aluminum, rugged construction of interlocking extrusions and formed hull & deck plates for the toughest runabout hull today... referred to as a "Vest Pocket Battleship" by marine experts. many competitors use less durable construction and butt weld where Crestliner uses special designed interlocking extrusions

Exterior finishes are a automotive type thermo-setting acrylic enamel other brands use air-dry

Metal deck beams are welded in place using a honeycomb pattern other leading brands use wood.

Cutter bow for easy entry & exceptional dryness in rough water

Longitudinal risers give superior performance, stability and add strength supporting the hull evenly at full speed or intermediate speeds.

Heavy gauge hull & deck plates, .100" thickness on bottom & .080" topsides of special formulated marine aluminum alloy, many leading brands skimp on alloy & thickness.

Thick mildew-resistant marine vinyl and deep high-density foam cushioning in all seats, others use economy grade vinyl & padding.

One-piece hand layup hull with reinforced fiber glass longitudinal stringers for a permanent distortion-free hull performance area.

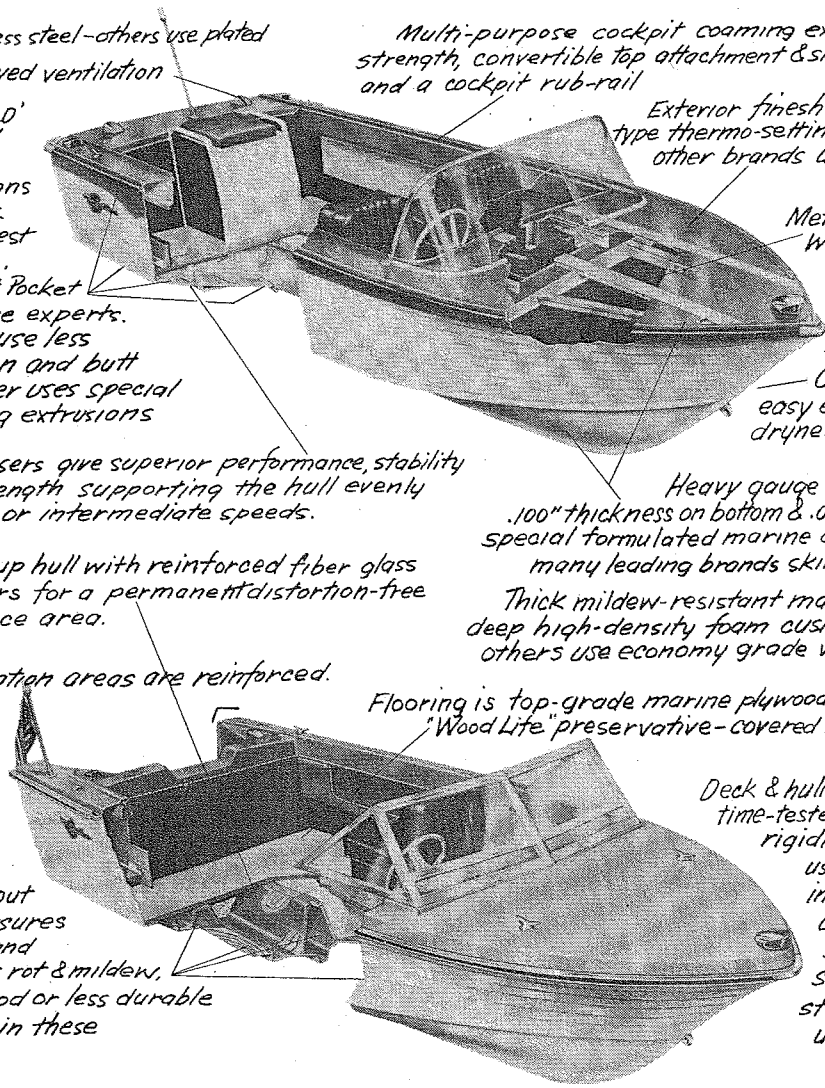

All hardware location areas are reinforced.

Flooring is top-grade marine plywood treated with "Wood Life" preservative - covered with non-skid vinyl.

The finest marine hardware is used, backed by a two year warranty.

100% fiber glass construction throughout the entire boat assures boat life, strength and protection against rot & mildew, often found when wood or less durable materials are used in these hidden areas.

Deck & hull are produced by the time-tested hand layup, rigidly controlled method, using layers of interwoven fiber glass cloth for maximum strength... proven superior to the chopped strand gun application used by others.

Be Wise... analyse! Get full information before choosing your boat.
